DETAILED ACTION

Allowable Subject Matter

Claims 1, 3-12, 14, 15, 28 and 29 are allowed.

The following is an examiner's statement of reasons for allowance:

The combination of at least platinum and iridium with the claimed portions and a ceramic layer having a thickness of about 1 nm to about 20 micrometers having an oxide and/or an oxynitride of at least one of the claimed metals and silicon where the base member is in direct contact with the conducting layer as claimed in a stimulation electrode are not taught nor suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The examiner agrees with Applicant's remarks filed, 12/5/06 with the exception of the remarks directed to the platinum portion of the alloy being greater than or equal to about 100 ppm being not an obvious or anticipated expectation because as the newly cited references below suggest, platinum may comprise 90% which could render to the alloy being greater than or equal to about 100 ppm in an electrode structure.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Barcel et al (US 5,267,564) teach a combination of 90% platinum and 10% iridium are preferable for use in an end cap portion of a stimulation electrode. There lacks a teaching or suggestion to increase the iridium to greater than 21% and it does not appear obvious to combine the teachings of Barcel et al with other art to create an electrode with an amount of iridium in a portion of greater than 21%.

Art Unit: 3762

Amundson (US 4,156,429) likewise teaches a combination of 90% platinum and 10% iridium are widely used as materials of construction for implantable electrodes. There also lacks a teaching or suggestion to increase the iridium to greater than 21% and it does not appear obvious to combine the teachings of Amundson with other art to create an electrode with an amount of iridium in a portion of greater than 21%.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George Manuel whose telephone number is (571) 272-4952.
